

Risk Disclosure Statement

This brief statement does not exhaustively disclose all the risks and other major issues of trading foreign exchange contracts. In view of the existence of these risks, the customer should only do so if the customer understands the nature of the contract, the contractual relationship that the customer will reach, and the degree of risk the customer faces.

Trading in foreign exchange contracts may not be suitable for some customers. The customer should carefully consider whether the transaction is suitable for the customer in accordance with the customer's experience, purpose, financial resources and other relevant circumstances.

Foreign exchange contracts are highly risky. The amount of the initial margin is very low relative to the value of the foreign exchange contract, so it is a leveraged transaction. Relatively small market fluctuations may have a proportionally greater impact on the funds

customers have or need to deposit. This may move in a direction that is not conducive or beneficial to the customer. The customer may completely lose the initial margin funds and any other funds deposited into the company to maintain the customer's position.

Placing conditional orders such as "stop loss" or "limit order", especially under very volatile market conditions, will not necessarily limit the customer's loss to the expected amount, because market conditions may make it impossible to execute such orders. The use of combined position strategies such as "arbitrage" and "arbitrage" positions can be as dangerous as simply maintaining "long" or "short" positions. Before the customer starts trading, the customer should have a clear understanding of all charges that the customer

may pay. These charges will affect the customer's net profit (if any) or increase the customer's loss. Electronic transactions. The trading through the electronic trading system is not only different from the open outcry market, but also different from other electronic trading systems. If a customer conducts transactions through an electronic trading system, the customer will face

risks related to the electronic trading system, including any hardware and software failures. As a result of any system failure, the customer's order may not be executed in accordance with the customer's instructions or not at all.

The client accepts any trading system provided by WeTrade FX according to the "original condition". WeTrade FX does not provide express or implied guarantees, including but not limited to implied guarantees of merchantability or conformity to specific purposes, purposes or applications; timeliness, no Interfered guarantee; or any implied guarantee arising from transaction use, transaction process or performance process. Under no circumstances will WeTrade FX be liable for any punitive, indirect, incidental, special or consequential loss or damage, including loss of business, profit and goodwill. WeTrade FX will not be responsible for any delay or interruption of service or delivery caused by any reason (including but not limited to hardware or software failure; regulatory measures; natural disasters; war, terrorism or our deliberate actions) or the inability of WeTrade FX or its affiliate systems to perform. The customer takes responsibility. The client acknowledges that there may be delays or interruptions in the use of our system, including, for example, WeTrade FX's intentional delays or interruptions for system maintenance purposes. WeTrade FX does not guarantee that alternative trading arrangements will be provided at a specific time, and WeTrade FX is not responsible for delays in placing orders..

WeTrade FX's margin policy requires that the client's account should always maintain an appropriate margin. Failure to meet the margin requirements may result in closing any existing positions and incurring losses. If the margin of an account is lower than the client's minimum margin required by WeTrade FX's margin call policy, WeTrade FX reserves the right to close all positions without notice.

If there are quotation errors (including but not limited to WeTrade FX quotation entry errors, quotations that cannot represent fair market prices, quotations that are quoted by WeTrade FX employees, including but not limited to incorrect large numbers quotations or due to hardware, software or communication lines or If the system and/or the external data source provided by the third-party supplier is inaccurate, we will not be responsible for the error of the account balance. The above-listed circumstances are not exhaustive.

When the price is wrong, WeTrade FX reserves the right to make necessary corrections or adjustments to the accounts involved. If there is a system error and the interest is not collected or paid as planned, WeTrade FX reserves the right to transfer the missing interest out or into the account at any time.

If a client grants a third-party trading advisor (such as a fund manager) the right to trade or control the client's account, whether it is full or non-full authorization, WeTrade FX will not be responsible for reviewing the client's trading advisor's rights under any circumstances. Choose, and do not make any suggestions on this. WeTrade FX does not make any statement or guarantee to any trading consultant; WeTrade FX is not responsible for any loss that the trading consultant's actions may cause the customer to suffer; and WeTrade FX does not imply or otherwise endorse or approve the operation methods of any trading consultant. If the client authorizes a certain fund manager to exercise any rights on the client's account, the client shall bear this at his own risk. The client should regularly check the activity in the client's account to ensure that the client's money manager conducts transactions on behalf of the client with the client's approval.

Transactions sometimes face severely volatile market conditions. For example, the release of key news may expose customers to additional risks, including but not limited to the risk that customers may not be able to obtain the price they requested. In a highly volatile market, WeTrade FX cannot guarantee its price for any customer. Simulate the situation. The simulated conditions may differ from the real conditions. Therefore, customers who conduct transactions on simulated accounts should not think that the same results will inevitably occur in real transactions.
